

6800 Series Hosted IP Terminals

Carrier Class IP Terminals to Empower Today's Business

6800 Series Hosted IP Terminals

Carrier Class IP Terminal to Empower Today's Business

Hands-free Conversation

The full duplex speakerphone on the 6812 and 6830 hosted IP terminals enable hands-free conversations. Additionally, the models also come with a headset jack for call center and extended use applications.

Attendant and Workgroup Options

Users can program their flex-buttons to monitor other stations in use by glancing at the indicator lights. They can also use the call coverage feature to answer incoming calls on other's behalf.

Simple Web-based User Setup

A major advantage of IP telephony is that it can be integrated with other network services. With the 6800 series IP terminals, users can easily program the feature buttons of their individual phones with a user-friendly web-based interface. This makes it easier for users to customize their phone for maximum productivity.

Single Cord Access

With the 6800 series IP terminal, you no longer need to run both a telephone line and a network cable to the desktop. All the features of the network are available without the clutter or expense.

Self-configuring

The 6800 series IP phones can be set up to auto-download for full and automatic configuration. The settings button can be used to access the configuration menu for easy set-up and on-going management of the IP terminal.

Future Focused

With IP telephony, your telephone becomes a terminal on your data network, so your carrier can quickly and easily implement new features for your phone as they become available.

The 6800 Series line of business-class IP terminals provide the features and functionality of a traditional desktop telephone along with the advantages of advanced IP technology.

There are 3 models in the series, the 6804, the 6812 and the 6830. The 6804 is designed for use in lobbies or low-use areas. The 6812 and 6830 are loaded with features to empower the busy attendant or executive, the only difference being the number of features and line appearances available.

Unprecedented Feature Sets

With up to 29 feature buttons an executive or administrative assistant can have single-button access to the most requested features. These sets provide the best value on the market today.

Full One Year Warranty

A Full One-year warranty is included on all 6804, 6812, and 6830 IP Terminals, providing assurance of unprecedented reliability and support. Investment protection is also available with a 2 or 3 year extended warranty option.

Smooth Transition to IP Technology

A seamless transition can be made from the existing legacy switch to your carrier's advanced hosted IP network using the single button feature access with which you have grown accustomed. Unlike others, fixed buttons replace confusing menus for setup or access.

Unique Call Coverage

Our unique direct station select (DSS) and busy lamp field (BLF) make the 6812 and 6830 an ideal attendant console, secretarial call coverage position, or a perfect solution anytime extensive single button feature access is required. By defining the bridged line appearance, single button monitoring and access to multiple user's stations is readily available.

The 6800 Series of IP telephones are sure to take your business to the next level of communications efficiency.

Unmatched Feature Set

The same extensive library of features that you have become accustomed to on your existing legacy product are available with Hosted IP services. This permits an easy transition for the end user.

- Single Button Access on fixed feature keys, soft keys or configurable keys allow for an unlimited variety of selections.
- The first true attendant console available in the IP hosted services arena, now an attendant can manage and monitor 24 line appearances with the unique single button DSS/BLF. This is perfect for an administrator who needs to monitor numbers of employees or an executive who requires extended single-button access to features, speed dials, or lines.
